

At Wrington C of E Primary School the principal aim of our Design & Technology Curriculum is to develop children's awareness of the process of designing, making and evaluating as a cyclical process.

We aim to...

- Enable the children to learn to meet a need and create for a purpose.
- Provide the children with an opportunity to broaden their designing experiences, learning about materials and learning to use different equipment to enhance their making skills.
- Give the children problems to solve and let them learn from their mistakes, involving valuable team-working skills and an awareness of basic health & safety requirements.
- Give children confidence and competence to identify, examine and solve practical problems using a variety of approaches, materials and methods
- Develop children's knowledge of subject specific vocabulary, simple mechanisms, structures and existing products.

- Develop skills and techniques in a progressive way through a range of activities that reflects continuity and a whole school approach.
